6 Ocean Migrations

Many fish migrate around the ocean, and some ocean mammals migrate, too. Some make very long journeys.

A Humpback Whale

Whales
Many whales, like humpback whales and gray whales, migrate to polar oceans in summer. Here they can find lots of their favorite food, krill. Young whales cannot keep warm enough in very cold oceans, so in winter, the whales migrate back to warmer, tropical oceans to breed.

Humpback Whale Migrations The Arctic The Antarctic migration routes

Emperor Penguins
In summer in the Antarctic, emperor penguins hunt for krill, fish, and squid in the ocean. In March, when the ice gets thicker, adult penguins migrate up to 200 kilometers across the ice to their breeding places. After the females have laid their eggs, they go back to the ocean to feed. The males keep the eggs warm on their feet. They often have to wait for up to 16 weeks for the eggs to hatch, and they do not eat during this time.

Discover
Penguins cannot walk well, so they often push themselves across the ice on their stomachs.
